GCSE AQA
Mathematics (Grade 9-1)
Foundation Tier

Practice Set 1
Paper 2: Calculator

Time allowed: 1 hour 30 minutes

- In addition to this paper you should have:
- A pen, pencil and eraser.
 - A ruler.
 - A protractor.
 - A pair of compasses.
 - A calculator.

Centre name

Candidate signature

- Instructions to candidates**
- Write your name and other details in the spaces provided above.
 - Answer all questions in the spaces provided.
 - Calculations show clearly how you worked out your answers.
 - Calculators may be used — if your calculator doesn't have a π button, take the value of π to be 3.142

- Information for candidates**
- There are 80 marks available for this paper.
 - Mark values available are given in brackets at the end of each question.
 - You may get marks for method, even if your answer is incorrect.

- Advice to candidates**
- Read carefully through the paper.
 - Do not spend too long on one question.
 - Save time at the end, go back and check your answers.

- 3 Kai works 7 hours a day for 6 days each week. His rate of pay is £12.36 per hour. Calculate how much Kai earns in a week. Circle your answer.

£14.42

£86.52

£160.68

£519.12

[Total 1 mark]

4 Circle the ratio that is equivalent to 5 : 8.

1 : 40

40 : 1

1.6 : 1

1 : 1.6

[Total 1 mark]

5 Fred, Guto and Julie each upload a video to a website. The number of views received by each video in the first week is shown in the table below.

Video uploader	Number of views
Fred	1173
Guto	1432
Julie	958

(a) Write the number 1432 in words.

.....
.....

[1]

(b) How many more views did Guto's video receive than Julie's in the first week?

.....

[1]

(c) After one month, Fred's video had received 1955 views in total. What percentage of these views were in the first week?

..... %

[2]

[Total 4 marks]

6 Use your calculator to work out the following. Give your answers to 3 significant figures.

(a) $\frac{11.5 + 31.2}{0.28}$

..... [1]

(b) 16^4

..... [1]

(c) $\sqrt[3]{21.588}$

..... [1]

7 Latif is using a map. It has the following scale:

1 cm represents 250 m

The route from his house to the bowling alley measures 13 cm on the map.

What is the real-life distance from Latif's house to the bowling alley?
Give your answer in kilometres.

..... km
[Total 2 marks]

8 Pupils in Year 9 at Springfield Academy have to study exactly one language. The table below shows their choices.

French	German	Spanish
34	18	68

A pupil is selected at random. Work out the probability that they study Spanish. Give your answer as a fraction in its simplest form.

.....
[Total 2 marks]

Solve:

(a) $x - 3 = 15$

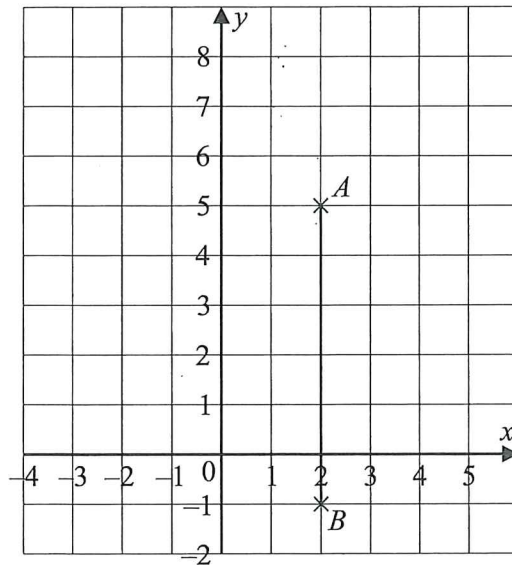

$x = \dots\dots\dots$
[1]

(b) $\frac{y}{3} - 7 = -4$

$y = \dots\dots\dots$
[2]

[Total 3 marks]

10 Points A and B have coordinates $(2, 5)$ and $(2, -1)$ respectively, as shown on the axes below.

(a) Write down the length of line AB .

$\dots\dots\dots$
[1]

(b) Line AC is perpendicular to line AB and half the length of line AB . Write down the two possible pairs of coordinates of point C .

$C = \dots\dots\dots$ or $C = \dots\dots\dots$
[2]

- 11 Some common words used in algebra are shown in the box below.

term	expression	function	identity
inequality	root	sequence	solution

Complete the table below by writing a word from the box in each of the three spaces.

Algebra	Description
$3d$	term
$3d - 6$	
$3d - 6 < 12$	
$3d - 6 \equiv 3(d - 2)$

- 13 Mike leaves his house at 6:30 am and rides his motorbike to the railway station. He waits at the station and then catches a train to the city centre. He then jogs to his place of work. A distance-time graph of his complete journey is shown below.

- (a) How far does Mike travel from his house to the railway station? Circle your answer.

0 km 10 km 20 km 50 km

[1]

- (b) How long does Mike wait for his train at the station? Circle your answer.

10 minutes 15 minutes 20 minutes 30 minutes

[1]

- (c) Explain how you can tell from the shape of the graph that the train is the fastest mode of transport that Mike uses during his journey.

.....

[1]

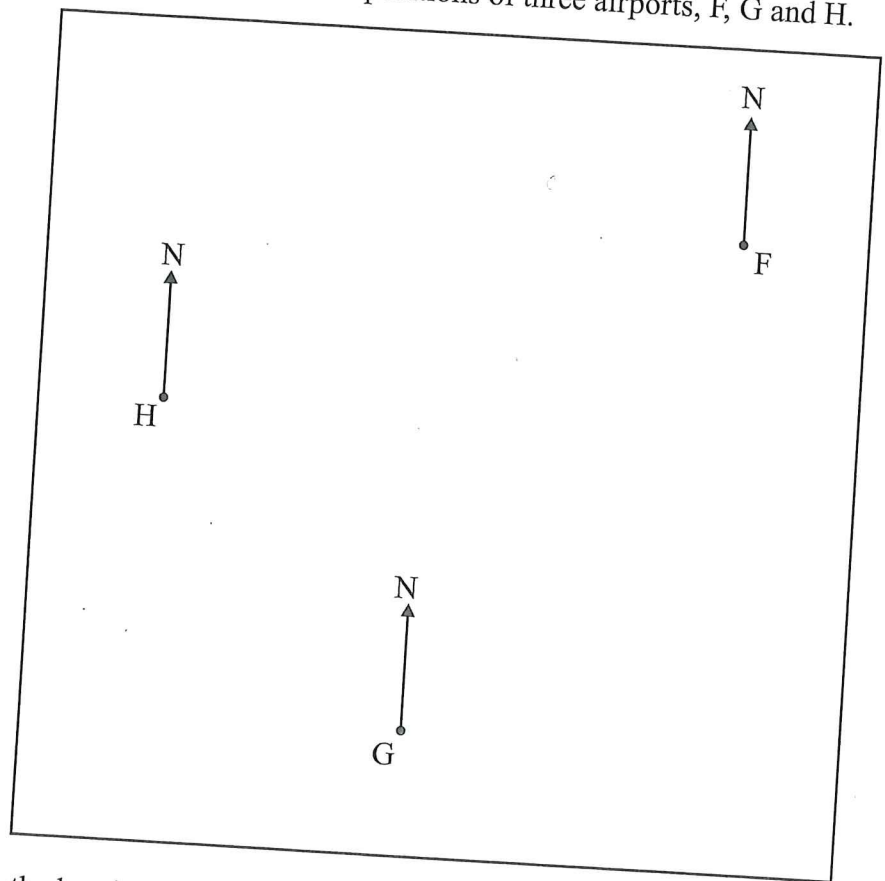

- (d) Calculate the average speed, in km/h, of Mike's complete journey to work.

..... km/h

In the London 2012 Summer Olympics, the Netherlands won 6 gold medals, 6 silver medals and 8 bronze medals. This information is shown approximately on the pie chart below.

Leave blank

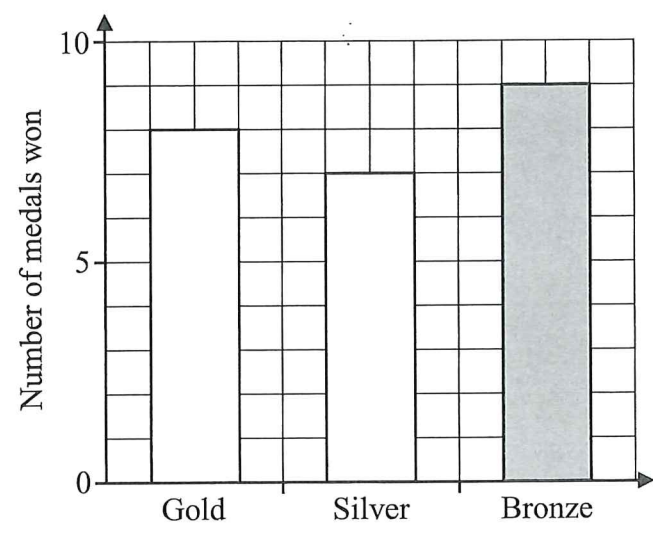

Not drawn accurately

(a) If the pie chart was drawn accurately, what would be the size of angle x ?

$x = \dots\dots\dots$ [2]

The number of medals won by the Netherlands in the Sochi 2014 Winter Olympics are shown on the bar chart below.

(b) At which Olympics did bronze medals make up a greater percentage of the Netherlands' total number of medals? You must show your working.

$\dots\dots\dots$ [3]

16 An acre is a unit of area.

Niall is a retired farmer who wants to offload $12\frac{1}{4}$ acres of his land.

He sells some to two other farming companies.

He donates the rest to a nature conservation charity.

Fibley Farms buys $6\frac{1}{8}$ acres at £8000 per acre.

Caraway Crops buys $4\frac{3}{4}$ acres at £8500 per acre.

It costs Niall £1750 in total to organise the sales and donation.

- (a) Calculate the area of land that Niall donates to the charity.
Give your answer as a mixed number.

..... acres
[2]

- (b) Calculate the profit that Niall makes from selling his land.

£

18 A teacher receives seven essays from her students.
The number of words in an essay is called the word count.
The word counts for the 7 essays are:

510 379 418 754 530 369 652

(a) Calculate the mean word count of the seven essays.

..... words
[2]

(b) Work out the median word count of the seven essays.

..... words
[2]

The teacher receives an essay late. When included with the other essays, the range in word counts is now more than double the range in word counts of the original seven.

(c) Explain clearly why the late essay must have the highest word count of all the essays.

.....
.....
.....
.....
[2]

(d) Circle the median word count of the eight essays.

500 510 520 530

- 4 In January 2016, the hedgehog population in Wales was estimated to be 96 400. This is 4% less than the estimate for January 2015. This formula is used to predict the size of the hedgehog population in the future:

$$n = 96\,400 \times 0.96^t$$

where n is the number of hedgehogs and t is the number of years after January 2016.

- (a) What assumption has been made by choosing to use this formula?

.....

.....

[1]

- (b) How many full years will it be before the hedgehog population is less than $\frac{3}{4}$ of the total in January 2016?
